Multiplica duas matrizes de transformção homogênea entre si

Calling Syntax

crela = tmult(brela,crelb)

I/O Variables

```
IN Double Matrix brela: B relative to A Homogeneous Transformation Matrix 4x4

IN Double Matrix crelb: C relative to B Homogeneous Transformation Matrix 4x4

OU Double Matrix crela: C relative to A Homogeneous Transformation Matrix 4x4
```

Example

```
brela = [0 -1 0 3; 1 0 0 0; 0 0 1 2; 0 0 0 1]
crelb = [0.866 -.5 0 2; 0.5 0.866 0 2; 0 0 1 0; 0 0 0 1]
crela = tmult(brela,crelb)
```

Hypothesis

RRR planar robot.

Limitations

As matrizes de transformção homogênea precisam seguir a sintaxe de classe e não tem validade para qualquer configuração de robô.

Version Control

1.0; Grupo 04; 2025/03/18; First issue.

Group Members

Function

```
function crela = tmult(brela,crelb)
```

Validity

Not apply

Output Data

```
crela = brela*crelb;
end
crela =
          -0.8660
  -0.5000
                       0
                             1.0000
   0.8660 -0.5000
                       0
                             2.0000
                  1.0000
       0
             0
                             2.0000
                0
                             1.0000
```
